

# Welcome to Newsletter **INFOCUSLATAM**

## An **ISHAM** Working Group

Hello Mycology Friends

Although the COVID-19 pandemic continues unabated in Latin America, we remain focused on providing cutting-edge expertise on medical mycology. The INFOCUS LATAM Group will intensify efforts on the following priority areas in the current circumstances:

- ❖ Providing updated and timely management of patients with fungal infections, such as mucormycosis, aspergillosis, rare filamentous fungal diseases, and endemic systemic mycoses in our region.
- ❖ Promote initiatives to raise awareness of fungal diseases currently neglected by health policy makers.
- ❖ After INFOCUS WEBHALL I “The Aspergillosis Day”, on the last April 01<sup>st</sup>

We are pleased to invite you to the forthcoming online activities:

- ✚ **Infocus WEBHALL II** – “One world, one guideline”, an event presenting the latest news on guidelines for diagnosis and management of fungal infections by experts.

- ✚ **IMEMA** – the first international meeting on systemic endemic mycoses of America. It will be developed virtually with presentations by top scientists from all around the Americas. The agenda will include epidemiological highlights, breakthroughs, and research findings in the field of pathogenesis and omics of dimorphic fungi, as well as clinical aspects, new trends in treatments and developments in diagnosis will be discussed. <http://imema.com.ar>

We hope this will be of great interest to all participants.

To keep updated on our latest activities, visit <https://www.infocuslatam.com.br/> or contact us through Facebook, Instagram, or LinkedIn.

Thank you and see you there
